

WELLPROD

This software allows the comprehensive management of hydrocarbon production. WELLPROD is where engineering, accounting and operation come together to monitor and improve the production of oil and gas.

WELLPROD enables your company to:

- ✓ See a clear picture of your operation.
- ✓ Capture and validate data from the field.
- ✓ Carry out production allocation processes.
- ✓ Deliver operational and regulatory reports.

Features

✓ Gathering systems

Registration and configuration of all collecting system components (tanks, liquid meters, gas meters, wells, etc).

✓ Data capture and validation

Collection and integration of all types of production information to easily manage your assets.

✓ On-line data capture

The system allows to get real time data from scada.

✓ Production accounting

Allocation of oil, gas and water based on daily production.

✓ Applications Integration

Wellprod can work integrated with different business applications, such as Sahara, OFM, etc.

Dashboard

Modern dashboard to monitor all your key variables for best decision-making and control.

Reports

Predefined and custom reports delivery for managers, royalty owners, joint venture partners, service companies, transporters and government organizations.
